

Fortunately we were only activated for a few weather events this year. In February, we participated in an East Central ARES District hospital emergency communications drill simulating a widespread medical epidemic covering multiple counties. This net tied local hospitals together throughout the District.

In April, Waupaca County hosted severe weather spotter training. Waupaca County hosts at least one severe weather training nearly every year.

In May, we set up our comm trailer at the Iola winter sports area and provided support comm for a mountain bike race. We had members located throughout the course and at the main building to support the Wisconsin Off Road Series "Iola Bump & Jump." This is an annual event.

In June several members deployed using the comm trailer to participate in the ARRL Field Day event. We placed 5th nationwide in our category. This was our second year participating and we plan to do this annually.

In July, for 4 consecutive days, we were set up alongside the Iola Fire/Rescue and Waupaca County Mobile Command Post at the Iola Old Car Show and Swap Meet to provide weather information and real-time monitoring for event goers, organizers, and Waupaca County Emergency Management. This is an annual event.

Also in July, several members provided mutual aid support to Outagamie County for the Wisconsin Farm Technology Days event comm support.

In August, we set up the comm trailer in South Park, Waupaca for the Waupaca Area Triathlon. We had members located throughout the race courses, vehicle mobile, bicycle mobile, and in South Park providing support communications for event officials. This is an annual event.

In October, we participated in the ARRL state-wide Simulated Emergency Test (SET). We identified several potential issues and developed strategies to overcome them.

Throughout the year, our monthly meetings included training in weather, emergency management and communications sometimes hosting instructors from other counties and other agencies.

This is only the highlights of the past year and members were involved in several other activities. We are excited and looking forward to an active 2013.

Winnebago county had a few interesting deployments this past year from flooding to destructive hailstorms/winds and multiple public events. We served as communications support for The Oshkosh half marathon, Oshkosh area Triathlon, "Race the Lake" cycling race, Fox Cities Marathon and numerous Skywarn deployments, including one during EAA in Oshkosh. Winnebago County also gave us an early Christmas present by updating some of the radios in the EOC and Mobile command Unit with dual watch radios, which expands our capabilities to include UHF frequencies and 220 MHz operation from those locations; we were previously limited to VHF only. The radios also have APRS capability with GPS built-in.

Professional Use of Social Media Sites

Thanks to the world of social networking and in particular, the launching of Facebook, the landscape of human relationships as it relates to how individuals connect, interact and communicate has been revolutionized. This social revolution is worldwide and cuts across varied demographics including age, culture and gender, thus opening the door for new avenues of human (or non-human as considered by some) interaction. Social networking has become an aspect of so many lives with 901 million active users on Facebook as of March 2012, according to the Associated Press. Beyond Facebook, social media entities such as LinkedIn, Friendster, Twitter and MySpace contribute to the significant number of users.

The ARES/RACES world is not immune to the impact of social networking and must not ignore it. As appointed officials have an obligation to understand the ethical dilemmas social media poses, particularly how an official should interact with volunteers, fellow operators and various served agency personnel. We have a responsibility to gain perspective regarding the impact of how these new human interactions influence individuals served, as well as the implications that emerge for practitioners as they engage in helping relationships.

Social media also presents ARES members with new ethical and professional challenges. If you use Facebook personally or professionally, you need to decide how you will separate your personal and professional identities in a forum that rapidly distributes info on the Web. Sound decisions about your online profile can let you and your served institutions prosper from the benefits that accrue to savvy Facebook users - while avoiding potential embarrassments and liability.

Before you create a profile or "post" your next "status update" on your "wall," you should:

- Understand potential boundary violations.
- Know how to activate your security and privacy settings.
- Remember that you represent not only yourself but your profession.

Here are a few examples of how social media can complicate and even compromise long standing relationships:

In 2011, a Miss America contestant was blackmailed using photos from her old Facebook page to try to get her dethroned from her title of Miss New Jersey. Amy Polumbo deleted her Facebook page before the state pageant, but that didn't stop an anonymous sender called "Committee to Save Miss America." Polumbo did not give up her crown, and the photos were not as bad as they were made out to be, but it teaches a lesson about how open to be on social networking sites.

In the fall of 2010, a young soccer referee with a Facebook account posted a picture of the crew taken prior to a game at a Division I site. The picture, like many in most Facebook accounts, was extremely innocent. The caption read, "This is a great venue for the game of soccer," as this field was recently renovated with beautiful grass, seating for over 1,000 spectators, a great press box and overall, a "great venue for the game of soccer."

As luck would have it, that referee was slated to work the conference tournament at the end of the season at the very same site he had posted the crew picture on his page. One of the coaches whose team had made it to the tournament, through the network of "friends" was sent the picture with the caption about the "great venue" and contacted the conference assigner and administrators stating that this "young referee" should not work the tournament as he was "biased" for the team whose site he had posted on his Facebook account.

The conference administrators agreed and the referee was removed as one of the crewmembers for the conference tournament.

Moral of the story - be careful what you post as it has ways of coming back to "haunt you."

Another incident involved another young referee who was removed from working a conference final as his name was posted on a player's account without the referee's knowledge. That player who was a starter for institution "X" stated on his Facebook page that his team had made it to the finals and the game was to be played back at his "home" state where the referee had officiated the player's games when he was in high school. The posting Simply stated, he "hoped the referee he had in high school was doing the final game as he was a very good referee and kept games from getting out of control and protected all players." The posting made its way to the opposing coach whose team had made it to the championship. Again the assigner was contacted and asked to remove the referee off the final as the coach felt it would be unfair since the player had the referee in high school games and the referee "might" be biased in calling the title game! Another example of a referee getting caught in a situation "not of his doing," but having a detrimental impact on the game of soccer!

What then is the implication for ARES/RACES and its members and officers? You may have a social media page, but be careful what you post as it can have negative impacts on the relationships with served agencies not only in your own area but all areas across the state, The emergency management community does communicate amongst themselves and what is said in another county or district can have consequences on relationships in your own area. Be mindful of how posts that could be interpreted to be in poor taste or those of political or controversial nature could negatively impact both fragile/strained relationships and long standing relationships with associated served agencies alike. When you accept appointment to a leadership position your actions not only reflect on you personally but also the organizations you are affiliated with. So please pause before you post and reflect on your words as they may be seen from the perspective of an Emergency Manager, Sheriff, Police or Fire Chief or Hospital President.
